

WordPress

The College recognizes the importance of messaging potential students, enrolled students, faculty and staff. College and department web pages are influential in attracting students to TAMU, as well as providing information to enrolled students, faculty and staff. A partnership exists between the College IT function, the College Strategic Communications Office and the college departments to develop the Liberal Arts brand and to provide the best online experience for those who navigate the Liberal Arts website.

The College leverages **WordPress** as the underlying infrastructure for its websites. Departmental personnel are able to update content and manage pages with this tool. This allows most web site management to be performed by departmental personnel who are best to react in a timely and responsive manner to website updates/changes. Issues relating to content are routed to the College Strategic Communications Office for assistance, while technical issues relating to the website should be routed to Liberal Arts IT. If you need assistance in either area, e-mail LiberalArtsIT@tamu.edu.
